Quiz Overview

No.	Type	Question	Given Answers	Correct Answers	Correct/Incorrect
1		Point out the incorrect statement:	A DataFrame is similar to a fixed-size dict because you can use the index labels to get and set values.	A DataFrame is similar to a fixed-size dict because you can use the index labels to get and set values.	Correct
2		Which of the following is used to convert the list data type to the Numpy array ?	Numpy.array(list)	Numpy.array(list)	Correct
3		Which of the following counts the number of elements in Numpy array ?	size()	size()	Correct
4		What is the use of the size attribute in Numpy array in python ?	It find the number of items	It find the number of items	Correct
5		Which of the following is not valid to import the numpy module ?	None of the above	None of the above	Correct
6		Which of the following can be used to make a Dataframe?	All of the above	All of the above	Correct
7		Which of the following argument we need to pass in reshape() function?	Both array and shape	Both array and shape	Correct

8		what is the use of the zeros() function in Numpy array in python ?	To make a Matrix with all element 0	To make a Matrix with all element 0	 Correct
9		Which of the following find the maximum number in the Numpy array ?	array.max()	array.max()	 Correct
10		Which of the following keyword is used to access the numpy module in python ?	import	import	 Correct
11		Which of the following is the essential argument to pass in full() function of Numpy array ?	Both of the above	Both of the above	 Correct
12		How we can find the type of numpy array in python ?	dtype	dtype	 Correct
